

**WHAT IS CLAIMED IS:-**

1. A method of assembling a printhead module for a printhead assembly, the method comprising the steps of:
  - mounting at least two printhead integrated circuits to an upper surface of at least one fluid
  - 5 distribution member, the at least two printhead integrated circuits each having nozzles formed therein for printing fluid onto the surface of print media; and
  - fixedly attaching with an adhesive material a lower surface of the at least one fluid distribution member onto an upper surface of a support member having fluid delivery channels for the nozzles of the at least two printhead integrated circuits, so as to form a unitary arrangement of the support member, the at least
  - 10 two printhead integrated circuits and the at least one fluid distribution member.
2. A method according to claim 1, further comprising the step of adhering an electrical connector to a section of the upper surface of the at least one fluid distribution member for connecting electrical signals to the at least two printhead integrated circuits.
3. A method according to claim 1, wherein the adhesive material is a curable resin.
- 15 4. A method according to claim 2, wherein the attaching step further includes the step of curing the curable resin so as to fix the at least one fluid distribution member to the support member.
5. A method according to claim 2, wherein the attaching step includes the step of depositing the curable resin about apertures on the upper surface of the support member which extend to the fluid delivery channels.
- 20 6. A method according to claim 3, wherein the attaching step further includes the step of curing the curable resin so as to form sealing gaskets about the apertures of the support member and associated apertures of the at least one fluid distribution member.
